

EHA Spezialmaschinenbau GmbH changes its name to EHA Composite Machinery GmbH

Steffenberg, Germany, August 24th, 2011

EHA, the worldwide known manufacturer of filament winding machinery (under the previous brand name “Bolenz & Schäfer/BSD”) as well as prepreg and coating/impregnating production plants, coating lines and air flotation dryers, changed name to EHA Composite Machinery GmbH. Company officials announced that EHA (short for Engineering High-Tech Assets), a subsidiary of the ROTH INDUSTRIES, improves transparency for its customers to focus on the mechanical engineering for the composite material production. This is confirmed by the recent deliveries of one huge Filament Winding Machine for the production of lightweight structural parts of civil rockets and a “one step” Hot-Melt Prepreg machine with a working capacity of over 1,500,000 sqm (16,145,800 sqft.) per year for the production of carbon fibre parts for sports industry.
